

1           1.    An electronic device comprising:  
2                a base having a first surface;  
3                a substantially transparent removable faceplate  
4 coupled to the base and covering substantially all of the  
5 first surface; and  
6                a replaceable ornamental insert positionable  
7 between the removable faceplate and the first surface of  
8 the base such that a portion of the ornamental insert is  
9 viewable through the substantially transparent section.

1           2.    The electronic device of claim 1 wherein the  
2 replaceable ornamental insert has an upper surface having  
3 an ornamental design printed thereon and the ornamental  
4 design is viewable through the substantially transparent  
5 section of the faceplate.

1           3.    The electronic device of claim 1 wherein the base  
2 is a base portion of a portable phone.

1           4.    The electronic device of claim 3 wherein the  
2 replaceable ornamental insert has an upper surface having  
3 an ornamental design printed thereon and the ornamental  
4 design is viewable through the substantially transparent  
5 section of the faceplate.

1           5.    The electronic device of claim 1 wherein:  
2                the base is a base portion of a computer; and  
3                the replaceable ornamental insert is located  
4 between the removable faceplate and the first surface of  
5 the base such that a portion of the ornamental insert is  
6 viewable through the substantially transparent section when  
7 the removable faceplate is affixed to the base.

1           6.    The electronic device of claim 5 wherein the  
2 replaceable ornamental insert has an upper surface having  
3 an ornamental design printed thereon and the ornamental  
4 design is viewable through the substantially transparent  
5 section of the faceplate.

1           7.    The electronic device of claim 1 wherein the base  
2 is a base portion of a digital game player.

1           8.    The electronic device of claim 7 wherein the  
2 replaceable ornamental insert has an upper surface having  
3 an ornamental design printed thereon and the ornamental  
4 design is viewable through the substantially transparent  
5 section of the faceplate.

1           9.    A digital audio player comprising:  
2                a base with a first surface;  
3                a substantially transparent removable faceplate  
4 coupled to the base and covering substantially all of the  
5 first surface; and

6 a replaceable ornamental insert positionable  
7 between the removable faceplate and the first surface of  
8 the base such that a portion of the ornamental insert is  
9 viewable through the substantially transparent section.

1 10. The digital audio player as in claim 9 wherein  
2 the replaceable ornamental insert has an upper surface  
3 having an ornamental design printed thereon and the  
4 ornamental design is viewable through the substantially  
5 transparent section of the faceplate.

1 11. The digital audio player as in claim 10 wherein  
2 the first surface includes an electronic display and the  
3 replaceable ornamental insert includes a display aperture.

1 12. A method comprising:  
2 manufacturing an electronic device with a base  
3 having a first surface manufactured to accept an ornamental  
4 insert thereon;  
5 manufacturing a substantially transparent  
6 removable faceplate to couple to the base and to cover  
7 substantially all of the first surface;  
8 manufacturing a replaceable ornamental insert  
9 positionable between the removable faceplate and the first  
10 surface of the base; and  
11 positioning the insert between the base and  
12 faceplate and coupling the faceplate to the base.

1        13. The method of claim 12 wherein manufacturing the  
2 electronic device includes manufacturing a digital audio  
3 player.

1        14. The method of claim 12 wherein manufacturing the  
2 electronic device includes manufacturing a digital game  
3 player.

1        15. The method of claim 12 wherein manufacturing the  
2 electronic device includes manufacturing a portable phone.

1        16. The method of claim 12 wherein manufacturing the  
2 electronic device includes manufacturing a computer.

1        17. An electronic device comprising:  
2                a base having an upper surface;  
3                an ornamental insert covering a portion of the  
4 upper surface; and  
5                a faceplate coupled to the base and the faceplate  
6 covering all of the upper surface of the base and the  
7 faceplate having a substantially transparent section.

1        18. The electronic device as in claim 17 wherein the  
2 faceplate is substantially transparent.

1        19. The electronic device as in claim 18 wherein the  
2 ornamental insert covers substantially all of the upper  
3 surface.

1           20. The electronic device as in claim 18 wherein the  
2 base is a portion of a digital audio player.

1           21. The electronic device as in claim 18 wherein the  
2 base is a portion of a portable cell phone.
